Canaan Valley Institute

Stream Restoration & Training

For over a decade, our scientists, geographers, surveyors, engineers, teachers, and planners have successfully completed a host of stream restoration research, design, and implementation projects. Additionally, we have provided training to hundreds of professionals in the principles of natural stream restoration.

SERVICES TO FIT YOUR NEEDS

CVI Restoration Services

We offer a complete array of stream and wetland restoration services. Clients may choose services to fit individual project needs.

Planning/Training

- Watershed-level assessment
- Facilitated project planning
- Stream restoration training
- Basic hydrology training
- Project prioritization
- Mitigation planning

Assessment/Monitoring

- Morphological stream assessment
- LiDAR topographic development
- Stream and land surveying
- Sediment sampling
- Wetland delineation
- Wetland monitoring

Design/Pre-Construction

- Permitting assistance
- Conceptual design development
- Natural stream design evaluation
- Pre-bid/pre-construction consulting
- Design and construction peer review

Implementation/Evaluation

- As-built surveys
- Project management
- Construction oversight
- Vegetation establishment
- Post-construction project evaluation

Combining Experience, Expertise, and Training

The key to our success has been an ability to collaborate with partners including municipal governments, state and federal agencies, watershed groups, nonprofits, private firms, and scientists to ensure adequate assessment, proper planning, and effective implementation.

By combining our collaboration expertise with hydrologic and geomorphic experience, research, and training, we provide a variety of services for restoration projects, floodplain management, streambank erosion, impact mitigation, and aquatic and riparian habitat impairment.

ASSESSMENT, PLANNING, IMPLEMENTATION
